High School Tutorial Program

The most critical high school subjects for entry into engineering programs are physics, advanced functions. Carleton wants to help your students prepare for their exams.

Last winter, our undergraduate students helped more than 35 high school students prepare for their physics, advanced functions and calculus exams.

The tutorial programs will be held:

- [Saturday, January 13, 2018](#)
- [Saturday, January 20, 2017](#)

Your students can register in advance for any or all of these free sessions. All they would need is their course notes, textbooks and material that they would like to review.

The sessions take place in 5050 Minto Centre. Parking is available in Lot 2 and we're just across the road from the campus O-Train stop.
